Desktop Web App		Android Mobile App	
iOS Mobile App			

ON CLOUD, ON-PREMISES & HYBRID

Talk can be provided on-premises, by locally installing and managing it inside your company's network.
Otherwise it's possible to use it on cloud. This solution is exclusively used when the software is hosted on third party's infrastructures, and it's recommended for companies that haven't got a solid business infrastructure and then they rely on providers.
Lastly, the hybrid solution for Talk takes advantage of the strengths of both the previous solutions. An hybrid configuration is the most flexible service management because provides the possibility to delegate part of the services to third party providers for a certain period of time or permanently.
